

1. Project Details

Project Name: DemoQA Web Application Testing
Testing Type: Manual Testing (Retesting & Compatibility)
Week: Week 2
Tester: Nimra Sabir Khan

2. Objective

The objective of this phase was to verify previously reported bugs from Week 1 through retesting and to evaluate the application's behavior across different web browsers to ensure compatibility, consistency, and performance.

3. RETESTING REPORT

Description

Retesting was performed on all previously identified bugs reported during Week 1. Each bug was re-executed using the same test steps to confirm whether the issues had been resolved or were still present in the system.

Retesting Results

Bug ID	Description	Previous Status	Retest Result	Current Status
BR01	Advertisements overlapping and not closing properly	Open	Issue still exists after retesting	Open
BR02	Form allows submission with missing required fields	Open	Validation issue still persists	Open
BR03	Confirmation popup close button not working	Open	Popup still not closing	Open
BR04	Web Tables page slow loading	Open	Performance issue still observed	Open
BR05	Buttons require multiple clicks due to UI issue	Open	Issue still present	Open

Retesting Summary

- All previously reported bugs were retested successfully
- None of the issues were resolved during retesting
- The application continues to show both functional and UI-related issues
- All bugs remain in **Open** status

4. COMPATIBILITY TESTING REPORT

Description

Compatibility testing was conducted to evaluate the behavior of the DemoQA web application across multiple browsers. The same test scenarios were executed on different browsers to identify any inconsistencies in functionality, UI rendering, and performance.

Browsers Used

- Google Chrome
- Mozilla Firefox
- Microsoft Edge

Test Areas Covered

- Forms (Practice Form)
- Web Tables
- Book Store Application
- Navigation Menu and UI Elements

Compatibility Results

Browse r	Test Area	Resul t	Issues Observed
Chrome	Forms, Web Tables, Book Store	Pass	Ads overlapping, left menu partially hidden, popup issues
Firefox	Forms, Web Tables	Pass	Same issues observed with slight UI alignment differences

Edge	Forms, Web Tables	Pass	Same issues present with slower loading and minor UI variations
------	-------------------	------	---

Observations

- The same functional and UI issues (advertisement overlap, menu visibility, and popup behavior) were observed across all browsers
- Minor differences in UI appearance were noticed, especially in Firefox and Edge
- Performance was slightly slower in Edge compared to Chrome
- Core functionality remained consistent across all browsers

Compatibility Summary

- The application behaves consistently across all tested browsers
- However, the same issues are present in all environments
- This indicates that the problems are **application-level issues rather than browser-specific issues**
- UI consistency and performance optimization need improvement

5. Conclusion

Retesting confirmed that previously reported bugs are still unresolved and remain in an open state. Compatibility testing showed that although the application works across major browsers, it suffers from consistent UI and functional issues across all platforms. Minor variations in UI and performance were also observed. Overall, the application requires improvements in stability, responsiveness, and bug resolution
