

**Prepared by:** Nimra Sabir Khan

**ID:**DHC-6738

**Role:** QA Intern t

**Project:** DemoQA Testing

## 1. Objective

To verify the functionality, usability, and overall performance of the DemoQA website by executing structured manual test cases, identifying defects, and ensuring that all major features are working as expected across different browsers.

## 2. Scope

This testing focuses on the key modules of the DemoQA website:

- Forms (Practice Form)
- Web Tables
- Book Store Application

It includes validation of form inputs, navigation, data handling in tables, search functionality, and overall UI behavior. UI/UX issues such as layout misalignment, overlapping elements, and usability concerns are also evaluated.

## 3. Testing Approach

Testing is performed using a **manual black-box testing approach**.

The following techniques are used:

- **Equivalence Partitioning (EP):**  
Input data is divided into valid and invalid classes to ensure proper validation.
- **Boundary Value Analysis (BVA):**  
Edge values (minimum and maximum limits) are tested to check system behavior.

These techniques are applied to the test cases designed in Week 1 and extended during Week 2 (Web Tables and Book Store testing included).

## 4. Resources Required

- Laptop
- Stable internet connection
- Google Chrome browser

- Mozilla Firefox browser
- Microsoft Edge browser
- Access to DemoQA website
- Google Docs / Sheets for documentation

## **5. Test Environment**

Testing is performed on a Windows-based system using the following browsers:

- Google Chrome (Version 146.0.7680.180, 64-bit)
- Microsoft Edge (Version 147.0.3912.60, 64-bit)
- Mozilla Firefox (Version 149.0.2, 64-bit)

Testing is conducted on the DemoQA website under a stable internet connection to ensure functionality, usability, and cross-browser compatibility.

## **6. Entry Criteria**

- DemoQA website is accessible and stable
- All required browsers are installed and working
- Test cases and bug reports are prepared
- Test environment is properly configured

## **7. Exit Criteria**

Testing will be considered complete when:

- All planned test cases are executed
- All identified defects are documented
- Retesting of reported bugs is completed
- Critical issues are verified (if any fixes applied)

## **8. Improvements Based on Week 1 & Week 2 Testing**

Based on execution of manual test cases and observed bugs, the following improvements are included:

- Web Tables functionality requires better stability during add/edit operations
- Form validation should be improved for empty and invalid inputs
- UI consistency issues (ads overlap, menu visibility) observed across all browsers
- Popup handling needs improvement for better user experience
- Cross-browser behavior is mostly consistent but UI alignment variations exist

These observations are derived from actual test execution and bug analysis performed in Week 1 and Week 2.

## **9. Schedule**

- **Day 1:** Test planning and environment setup
- **Day 2:** Test case execution (Forms module)
- **Day 3:** Test case execution (Web Tables & Book Store module)
- **Day 4:** Bug reporting and documentation
- **Day 5:** Retesting and compatibility validation
