

Performance Test Plan — Week 4

Student Name: Nimra Sabir Khan

Student ID: DHC-6738

Application: DemoQA Web Application

Project Title

Performance Testing of DemoQA Book Store API using Apache JMeter

1. Objective

The objective of this performance test is to evaluate the performance and stability of the DemoQA Book Store API under load conditions using Apache JMeter. The test checks system response time, throughput, and error handling when multiple virtual users access the API simultaneously.

2. Testing Tool

- Apache JMeter

3. Test Environment

Component	Details
Application	DemoQA Book Store API
URL Tested	https://demoqa.com/BookStore/v1/Books
Protocol	HTTPS
Request Method	GET
Tool Used	Apache JMeter
Operating System	Windows
Virtual Users	50 Users

4. Test Scenario

Parameter	Value
Number of Threads (Users)	50
Ramp-Up Period	10 Seconds
Loop Count	1
Request Type	GET Request
Endpoint Tested	/BookStore/v1/Books

5. Performance Metrics

The following metrics were observed during testing:

- Response Time
- Average Response Time
- Throughput
- Error Percentage
- Minimum and Maximum Response Time

6. Expected Outcome

The API should successfully handle multiple user requests with minimal response delay and no functional failures during execution.

7. Test Deliverables

- JMeter Test Plan
- Performance Testing Report
- JMeter Screenshots
- Graph Results
- Summary Report
